

Device Security

Device Security is the practice of securely interacting with data on a device using access control procedures such as identification and authentication.

DO

DO lock the computer 'ctrl + alt + delete' when leaving your seat

DO lock phones or tablets with a pass code

DO stay vigilant for 'shoulder surfers' who may try to watch you entering passwords

DO sign out completely from your device when away for extended periods of time or when finished

DON'T

DON'T save passwords on shared machines

DON'T share your passwords with anyone else

DON'T check 'Keep me signed in' or 'remember me' box

DON'T share user accounts

DON'T leave the computer unattended while you are logged in

DON'T connect to untrusted wi-fi hotspots
