Compliance

Your device must meet certain requirements to stay compliant. If not, your fortnightly compensation may be stopped!

Running into issues? Here's a guide to decipher the tech-speak!

Require a password to unlock mobile device	You need a password for your device as you have corporate information to protect.
Require password type	You need a more complex password (e.g., not '1234', '0000' or 'password').
Minimum password length	Your password must be 4 digits or more.
Minimum OS version	You need to update your phone to the latest software version via settings.
Maximum minutes of inactivity before password is required	Your device needs a time-out setting to lock automatically after five minutes of inactivity.
Require encryptions of data storage on device	You must have data encryption on your device (standard on most devices. Check settings if unsure).
