

What is Connect2Work?

Connect2Work has been developed to enable mobile phone access to corporate information, systems and work apps.

We want you to connect in a way that's helpful to you and the people we support.

To help you stay safe while getting mobile, the first thing we are doing is rolling out security software, Microsoft Intune Company Portal, that will protect the information on your chosen device.

Microsoft Intune Company Portal ensures private information and personal apps are not visible to Endeavour Foundation, while protecting company data when staff are accessing Endeavour Foundation apps.
