Beware of phishing!

Look out for spelling or grammar mistakes

Legitimate companies usually have high standards for their communications. If an email has many errors it may be a scam.

Educate yourself & others

Learn about common phishing tactics and share tips with friends and family.

Beware of urgent requests

Be wary of emails or messages that create a sense of urgency or pressure for you to act quickly.

Don't click unknown links

Avoid clicking links or downloading attachments from unverified emails.

If in doubt, send the email to ICT Security via the #TeamPossible Support Hub.
